INTRODUCTION

[Qt Handy](#) is a collection of Qt utilities and event filters. The implementation is based on [QtPy](#) so it's both compatible with PyQt5 and PySide2. Licensed under the [MIT](#).

2.1 Installation

Using pip:

```
pip install qt-handy
```

2.2 Example

```
from qthandy import underline, bold, vbox, btn_popup_menu, ask_confirmation, flow
from qthandy.filter import InstantTooltipEventFilter
```

A TO Z INDEX
